

CHAIN LINK, SECURITY AND STEEL FENCING

Chain link and steel fencing is ideal for use in a variety of applications such as tennis courts, paths and gardens. Cyclone Security mesh can also be used and is easily topped with barbed wire or, in some circumstances, electrical wire, to prevent trespassers from climbing over. Chainmesh fencing can be built to various heights with colour options available.

GARRISON SECURITY FENCING

This heavy duty tubular fence makes intrusion extremely difficult. Finished with an aggressive pointed top, the fence is dangerous to climb. Each installation is completely made-to-order, so there are no unsightly joints like you find in standard prefabricated fencing.

DECORATIVE FENCING

Team Work Fencing Contractors offer an array of decorative options. Almost any colour and style imaginable is available to enhance the appearance of your home and property.

RURAL FENCING

Choosing a rural design can give your property a rustic, practical fence that is usually used to keep livestock in and predators out. Rural designs are cost-effective and can deliver an attractive option for many home owners for their decorative qualities.

BRUSHWOOD FENCING

Brushwood delivers a decorative and natural look that is also practical. This type of fence has high sound absorption to keep traffic and other neighbourhood noises out. Each installation is completely made-to-order, so there are no unsightly joints like you find in standard prefabricated fencing.

Benefits of PVC Fencing

- Brushwood can be mounted between piers for a more modern look
- Works to prevent erosion in some applications
- Fire resistant
- Unappealing surface for graffiti
- Ideal for use in windy conditions

A Fence For Every Requirement

COLORBOND® FENCING

COLORBOND® steel fences are offered in fourteen colours to complement any building or landscape.

Colorbond®

Benefits of COLORBOND® include:

- Durable and easy to maintain
- Security and privacy
- Available in many different colours and styles
- Incredibly easy to maintain
- Environmentally friendly fencing option

Looks Great

With its clean, crisp lines, COLORBOND® steel looks great from both sides of the fence. Select from two profile options.

Harmony

Harmony incorporates a profiled sheet that is identical on both sides of the fence.

Trimclad

Traditional look with a different profile to each side of the fence.

COLORBOND® steel fences are offered in fourteen colours to complement any building or landscape.

Contemporary

Classic

Colorbond Durability

Since COLORBOND® fencing is made of steel; it won't be eaten by termites or rot. It's also essentially fireproof, and can even help protect your home and yard in the event of a bushfire.

COLORBOND® steel panels are made in Australia from Bluescope steel which comes with a 10 year warranty. They feature a Zinalume steel base, which delivers anti-corrosion performance. All you have to do for maintenance is ensure the bottom of the fence is kept clean from debris and dirt, and occasionally wash the fence. Since steel is a completely recyclable material, using a steel fence is an eco-friendly option.

HARDIEFENCE™ EASYLOCK® SYSTMADE

HardieFence™ uses the EasyLock® system with capping to provide a beautiful, strong fence that doesn't require posts and can be painted to suit the location.

HardieFence Benefits:

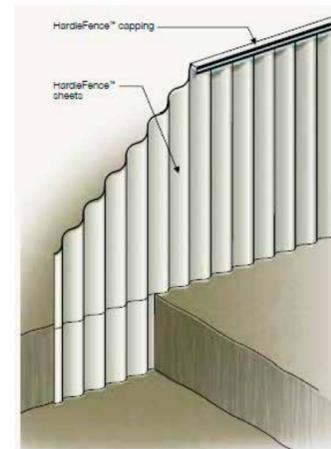

- Durable construction and materials
- Resistant to damage from termites, rot and fire
- Looks great (and identical) on both sides
- Ready to paint, if desired
- 0-year warranty
- Buried up to 600mm

Designed with the West Australian market in mind

HardieFence™ can be installed on sloping or level residential sites, where a durable, freestanding fence is required.

The HardieFence™ system is made of corrugated, 7mm thick sheets that are partially buried. The top of the sheets have metal capping for a pleasant overall look.

Adding to this it's postless, and there are no protruding bolts, sharp edges or nails.

HardieFence EasyLock system

HardieFence EasyLock system is designed to be buried into the ground, eliminating gaps below the fence on both level and sloping sites. This provides a barrier to weeds growing under the fence and is a great benefit when trying to keep even the most enthusiastic dog from getting out.

HardieFence™ cannot be used as a retaining wall.

PVC FENCING

PVC Vinyl fencing is a great solution for many domestic applications. It's made from essentially weatherproof vinyl material that will never need painting or refinishing.

Benefits of PVC Fencing

- Lifetime guarantee of 30+ years
- Maintenance free
- Graffiti resistant
- Termite free
- Never needs painting
- Free of harmful chemicals like Arsenic, Lead & Creosote

Picket PVC Fencing:

Two ranges are available; Gothic Scalloped and New English Flat. Gothic scalloped adds a colonial arched design to your home. New English Flat is straight across and the same height, adding simplicity and clean cut lines.

Strengthened with an aluminium insert in the bottom rails these units have added security features including notched pickets and rails to ensure they can't be stolen.

Rural PVC Fencing

Rural fencing comes with one, two or three rail options and is perfect for a farm style fence. It is an excellent alternative to wood, steel or wire because of its durability.

The rails are reinforced with internal ribs, making the fence strong enough to support an adult's weight (for example climbing on or over the fence). A horse leaning on the fence will not break the rails as they are designed to flex and return to their original position. The specially designed notched system allows the rails to pop out of the post under severe impact.
